

ALGORITHMICALLY-BASED LIFE INSURANCE SOLUTIONS

prepared for:

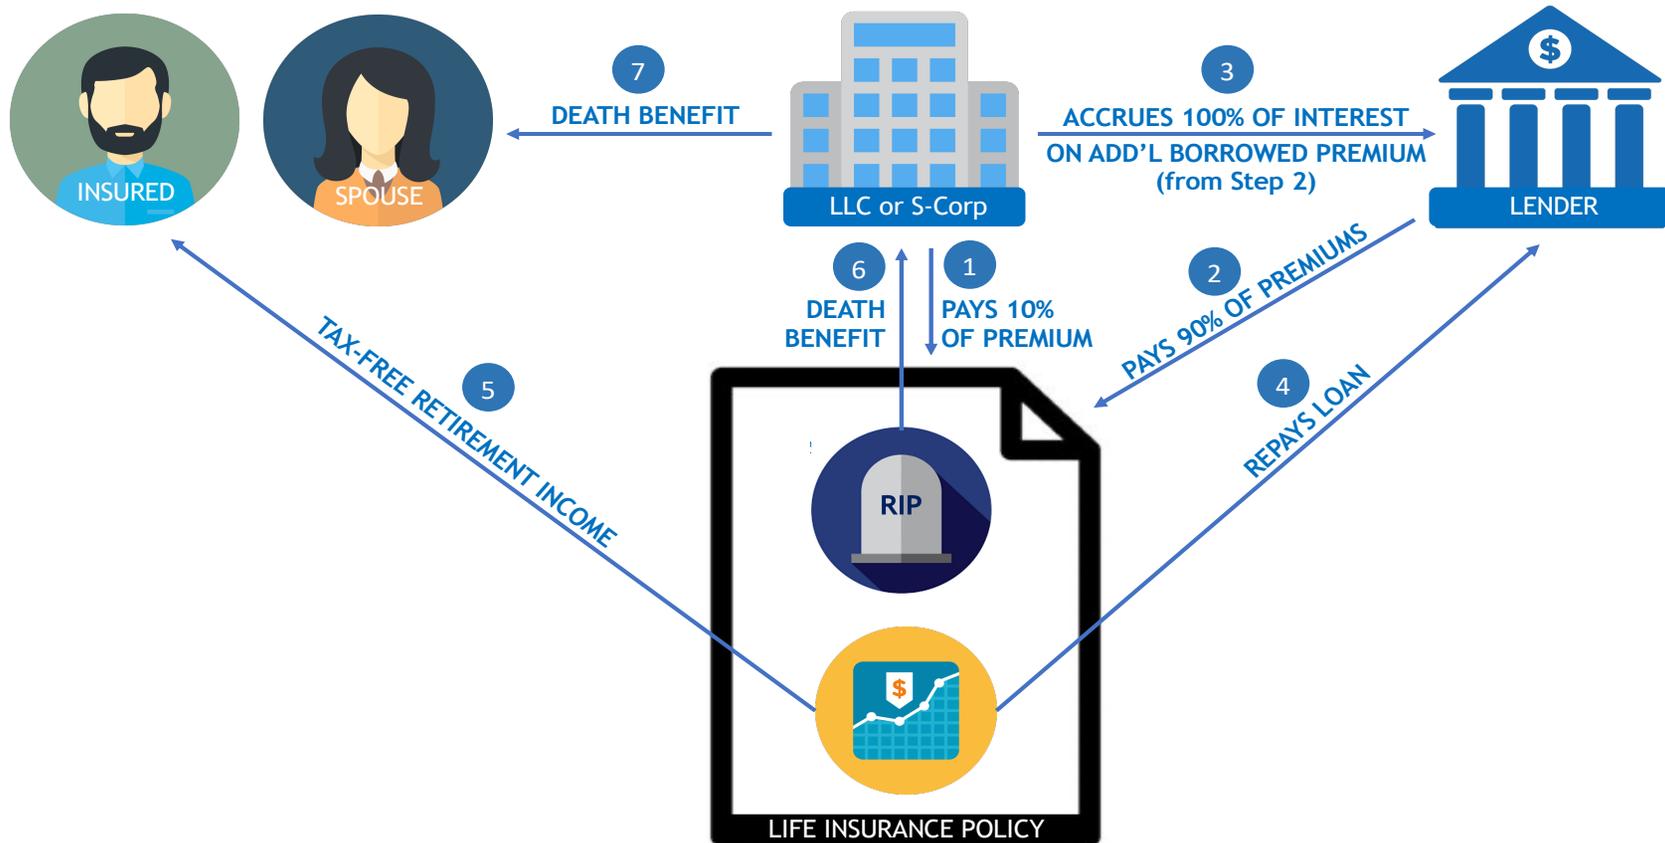

Male A55 - Retirement Income

OPTION 1: 0
OPTION 2: PARTIAL-EQUITY INTEREST ACCRUAL
MODELED BY: LIONSMARK CAPITAL

AGENT: Darren Sugiyama
DATE CREATED: 04/06/22

PARTIAL-EQUITY INTEREST ACCRUAL: TAX-FREE INCOME

PARTIAL-EQUITY INTEREST ACCRUAL PREMIUM FINANCING: TAX-FREE INCOME DRAWDOWN PLAN

1. The policy is owned by an entity (either an LLC or an S-corp). The entity pays 10% (sometimes more) of the policy premium.
2. The lender will pay the balance of life insurance premiums due (in this example, 90% of the premiums) directly to the life insurance carrier.
3. The entity will accrue the interest due each year on the cumulative loan balance and post the policy (and additional outside assets) as collateral.
4. The appreciated policy value will repay the cumulative loan balance (including the additional compounded debt due to accruing the interest due) to the lender.
5. The entity will take policy loans and pass them through to the insured person as tax-free retirement income. Such loans are netted out of the CSV and death benefit.
6. Upon the insured's death, the policy death benefit will pay to the entity.
7. The surviving spouse shall receive the unlimited step-up in basis, and enjoy the net death benefit on a tax-free basis.

NON-FINANCED SOLUTION

This solution requires the client to pay premiums out of pocket throughout the period shown below in the "Annual Premium" column.

DEATH BENEFIT COMPARISON

Program Assumptions

I understand that all assumptions made in this document are hypothetical scenarios using hypothetically constructed assumptions of index returns, borrowing rates from a third party premium financing lender, carrier participating loan rates, and carrier policy charges. I understand that these assumptions are merely hypothetical and are not guaranteed by the carrier or the life insurance contract, and that such assumptions may vary based on market performance and a variety of financial variables. I attest that I have been given a copy of the full carrier illustration prior to making any decisions to purchase a life insurance policy. I also understand that this life insurance policy is not an “investment” or a “marketable securities product”; it is an insurance product.

Financing Premiums

I understand that I am purchasing a life insurance policy. The premiums shown in this document are premiums that I agree to either pay or finance through a lender. My intention is to pay or finance such premiums in the arrangement and in the amounts as shown in this illustration. I understand that there are certain minimum premiums that will be required to keep the policy in force. I attest that the payments into the program are affordable to me and that the death benefit is appropriate and suitable based on what I have disclosed to Lionsmark Capital about my liquid net worth, my current and future cash flow situation, and aspirational personal financial plan. I acknowledge that I have been shown one or more premium financed options wherein a third party lender funds some or all of the premiums and interest on such third party loan is due each year (whether paid or accrued), as well as one or more non-financed options wherein I would be responsible for paying 100% of the policy premiums myself. I acknowledge that I have not been forced, coerced or incentivized to finance premiums through a lender or bank, however I understand that it is within my right as the policy owner to exercise this right, pending carrier approval and lender approval. I acknowledge that the decision to finance premiums, per carrier and lender approval, is my own decision based on my own discernment regarding the suitability and appropriateness of such arrangement due to my current financial situation and my own projected future financial situation.

Collateral

I understand that the policy cash surrender value may be used as some or all of the collateral required in the premium financing loan, and that the third party lender will take a collateral assignment against the policy in such arrangement. The Loan-To-Value (LTV) requirement is typically 95% (cumulative loan to policy cash surrender value) in order for the policy to be the sole collateral on such loan unless otherwise stated in the lender’s fully executed loan document. In other words, the policy net cash surrender value must be approximately 105% of the outstanding loan balance in order for the policy to be the sole collateral with no additional outside gap collateral required. I understand that should a shortfall in LTV occur at any time during the loan period, I will be required to post additional outside collateral based on the lender’s requirements, or pay a portion or all of the premium out-of-pocket. I understand that such outside collateral amounts shall be determined by the lender prior to funding the loan in each policy year based on the type of collateral I am posting, as well as the results of lender underwriting me as a qualified borrower, and that such collateral requirement amounts shall be fully disclosed in the official loan document. I have been made aware that such collateral amounts depicted in this document are only hypothetical and may vary in real world situations based on lender requirements, actual cumulative loan balances, actual collateral type of funds, and actual policy cash surrender values, and that each lender has different terms and requirements. I acknowledge that I have been advised to analyze scenarios less favorable than the policy values that have been illustrated in this document to anticipate the potential of greater collateral amounts I may need to post in this premium financing arrangement. I also acknowledge that I have communicated to Lionsmark Capital, its representatives, and all agents of record of this policy that I have (or will have) at least 1.5 times the peak collateral (the maximum collateral in a given year depicted in this document) in the form of the type of collateral the lender has approved in the official loan document that I have signed (or have committed to sign in association with the arrangement articulated in this document).

Interest Due & Client Contributions

I understand that should I elect to borrow some or all premiums in this design, interest due on such financed premiums shall be due each year, and I attest that I intend to either pay such interest payments to the lender each year in full, or pay some premium amounts myself and accrue some or all interest. Should I elect to accrue interest, I understand that this decision results in compounding debt, increasing my cumulative loan balance with the third party lender. I have been made aware by Lionsmark Capital the fundamental risks of interest accrual, and that should the compounding debt outpace the growth of the policy cash values, I may be required to either pay down the third party loan earlier than what is depicted in this document, or infuse more capital into the policy than what is depicted in this document to increase the policy cash value and/or pay for the cost of insurance in order to keep the policy in force. I acknowledge that any decision to accrue interest is my decision and my decision alone, that any such decision is NOT due to my inability to afford paying the interest, rather due to my preference of repositioning such capital in another asset that I feel would yield a higher return, and that I have not been encouraged to accrue interest as a way to reduce my financial contributions to this premium financing program. I acknowledge that Lionsmark Capital has offered me programs - both financed and non-financed life insurance solutions - wherein I would either pay all premiums or all interest due out-of-pocket. Should the carrier and lender allow me to accrue interest due to my liquidity and net worth, and should I elect to do so, I attest that Lionsmark Capital has advised me against any premium financed life insurance strategies wherein 100% of premiums are borrowed, 100% of interest is accrued, and outside collateral is merely posted (sometimes referred to as a "zero cash contribution strategy") because of the substantial risk incurred. I attest that any depiction and/or execution of this aforementioned high-risk premium financing arrangement illustrated was neither endorsed nor encouraged by Lionsmark Capital, and was designed per my specific request, and that Lionsmark Capital was merely taking direct orders from me per my specific request. Should I decide to execute such "zero cash contributions strategy" (or any strategy wherein I pay less than 10.00% of premium and I accrue 100.00% of the interest due), I acknowledge such risk and attest that I intimately understand the mathematical and financial risk associated with such financing design, and hold harmless Lionsmark Capital and the "Released Parties" mentioned later in this document.

Interest Rates & Loan Fees

I understand that there are loan fees associated with this program that may include loan origination and arrangement fees, loan document fees, and closing costs, and that such fees will be disclosed in the official loan document that shall be made available to me prior to accepting the third party loan. I understand that the borrowing rates shown in this document are purely hypothetical and do not represent any specific lender or loan agreement and do not guarantee any specific loan terms.

Loan Renewal

I understand that at the end of each loan term, the lender will require me to produce the most recent tax return of the policy owner or proof of filing an extension, a copy of the life insurance policy in force illustration, a copy of the most recent life insurance policy statement, an updated personal financial statement signed by the insured person or an updated corporate financial statement (if owned by a company) signed by an authorized company officer.

Loan Payoff

Should I use policy values to pay such loan off, I understand that I may elect to do so using either a withdrawal, a fixed policy loan, or a participating policy loan. I acknowledge that Lionsmark Capital explained the potential benefits and potential risks of each of these options regarding exiting the loan. I understand that the example illustrated in this document is a hypothetical example of using one of these loan exiting options, and that I may also elect to pay off the premium financing lender using outside funds instead of policy values. I understand that the year in which the loan is paid off using policy values as illustrated in this document is a hypothetical example, and that should policy values allow, I may exercise this method of loan payoff at an earlier year than as illustrated. I also understand that I may elect to pay off the loan at a later date than as illustrated in this

document. It has been communicated to me by Lionsmark Capital that exercising a loan exit strategy using policy values to payoff the third party lender is largely due to the policy value as such time, and that I should have an inforce policy illustration run by the carrier using a conservative index crediting assumption that depicts future hypothetical policy values based on this assumption, and also to analyze the sustainability of the policy staying in force longer than your life expectancy. I acknowledge that it is recommended by Lionsmark Capital that such illustration be run with the goal of keeping the policy in force until it ends with no policy lapse prior to endowment, typically until age 120 (policy endowment may vary from carrier to carrier and product to product), and that this inforce illustration should be done prior to any policy drawdown. I also acknowledge that such figures depicted in any illustration are hypothetical depictions based on certain assumptions that may or may not happen in a real world situation, similar to any hypothetical financial projection in any insurance policy or any non-insurance based investment product.

Policy Design - Death Benefit

I understand that my policy allows for a face reduction, where the death benefit of the life insurance policy may be intentionally designed (or redesigned after the policy is in force) to decrease after a certain number of years in order to maximize the cash value accumulation potential by reducing the cost of insurance within the policy due to a lesser death benefit amount. I understand that although this life insurance policy may be used for cash value accumulation (as a separate asset class within my overall financial portfolio), there is a legitimate and definite insurable need for the death benefit of this policy. I acknowledge that it is both my personal desire and a quantifiable need to have such death benefit amount, and that such death benefit amount is suitable for me based on my income, net worth, earning potential, and the current and future economic value of my life as it pertains to the financial sustenance of my beneficiaries.

Policy Design - Crediting Methodology

I understand that the crediting method used within this policy is dictated based on the returns of a particular index, fixed account, or dividend scale (depending on the product design election that I have made), and that such crediting occurs after all policy charges have been deducted. It has been disclosed to me that even in such cases wherein the credit the policy receives a 0.00% credit in a given year (e.g. IUL policies with a 0.00% floor), the policy net cash surrender value may decrease due to the policy charges, despite the "0.00% credit." I understand that the static annual crediting assumption as illustrated in this document is merely a hypothetical percentage, and that actual future annual returns will vary, resulting in greater or lesser policy cash value, and that should policy cash values be less than illustrated in this document, that I may need to contribute more capital towards this program. I understand that such crediting assumptions depicted in this document are not guaranteed and are merely hypothetical scenarios, and that the outcomes depicted in this document are merely hypothetical. I understand that the crediting method used in this design uses a 1-year annual point-to-point crediting method wherein all net premium values are applied to this 1-year bucket, and that should I elect to use a Dollar Cost Averaging method wherein not all net premium values go into the primary account receiving this credit, that at the policy/loan anniversary when lender calculates the collateral required, and the net policy value at such time will not reflect the annual credit on 100% of the policy gross accumulated value (typically only 1/12 of the value), hence the Lionsmark Capital design as depicted in this document does not illustrate a Dollar Cost Averaging method of funding. I understand that should I elect to use a Dollar Cost Averaging method to fund this policy, I will most likely have to post more outside collateral than as depicted in this document.

Policy Design - Charges Methodology

I understand that there are policy charges, including but not limited to premium loads (taxes charged), cost of insurance charges, rider charges, administrative charges, and asset-based charges should I elect to purchase certain crediting enhancements/bonuses (if available). Such charges have been transparently articulated to me by Lionsmark Capital and I understand that some of these charges are fixed and some are variable, all of which are disclosed in the full carrier illustration, which I have received. In such cases wherein multiplier or high-cap options that may enhance the annual crediting are available, it has been disclosed to me how such associated asset-based charges may affect

outcomes, relative to the the crediting enhancements. I understand that should I elect to purchase such enhancement riders in the policy that in a given year wherein the policy receives a 0.00% index credit, that both the standard policy charges AND the additional asset-based charges would cause the net cash surrender value to decrease in such given year. Should I elect any such credit enhancement options, I acknowledge that I have been made aware of such scenarios wherein this may occur, and that I would be taking a over time, relative to the associated asset-based charges. I also attest that I have been provided with report that depicts a hypothetical scenario in which similar charges and credits are applied to a hypothetical synthetic asset during different periods wherein volatility exists. I understand that such report does NOT depict a recreation of this life insurance policy I am purchasing, but rather a proxy - a made up, fictitious asset whose crediting and charges methodology is similar to the crediting method used in this policy, and that such proxy/report is for educational purposes only, used to explain the methodology of how certain credits and charges are calculated, and NOT as a projection or assumption that the future outcomes of the life insurance policy I am purchasing will be similar to the outcomes depicted in the hypothetical synthetic asset (the proxy).

Crediting & Drawdown Assumptions

I acknowledge that the policy values crediting assumption made in this document has been restricted to "AG 49-A" (Actuarial Guideline 49A) which is a guideline created by the National Association of Insurance Commissioners (NAIC), which limits the maximum allowable index credit to the average of every 25-year period over the last 65 years. It has been explained to me that any participating loan rate (PLR) depicted in the carrier illustration cannot be less than 0.50% less than the illustrated crediting assumption despite what the actual carrier participating loan rate actually is. I understand that in reality, the potential positive or negative arbitrage between the actual policy crediting rate in a given year and the participating loan rate in a given year may result in a more favorable result or a more less favorable result.

Election To Modify The Program

I understand that there may be a cash surrender value within the policy during certain years, and that I may exercise my right to either make tax-free withdrawals up to basis and/or tax-free policy loans on my own volition (after the third party loan is paid off completely). I also understand that the policy - in general - is not designed to take significant withdrawals or policy loans within the first 1-10 years of the policy, regardless of the premiums being financed or not, and that doing so poses great risk to the sustainability of the policy, hence why the design as illustrated in this document does not show any such drawdowns. I understand that the scheduled premium payments as shown in the carrier illustration are one of many ways to fund this life insurance policy. I understand that I may exercise my right to decrease the face amount of the policy and decrease the annual premiums after a certain number of years should I choose to do so, but that by doing so, the cash value of the policy may be substantially less than the numbers as illustrated in this document. I also understand that I may exercise my right to skip premium payments and/or end annual premium payments earlier in the policy than the scheduled premium payments as shown in the carrier illustration, however if I choose to do so, the cash value accumulation and death benefit may not perform as shown in this document and may put the policy in jeopardy of lapsing. I understand that such benefits should be reevaluated at the time of such policy alteration, and I understand that it is advisable that I should consult my financial professionals including but not limited to my life insurance agent, my financial advisor, and my estate planning attorney when appropriate, prior to independently making such changes. I attest that should I make any modifications to the as-illustrated program that result in any adverse results, including but not limited to reducing or increasing premium amounts funded in any given year, type of collateral posted, dollar cost averaging premium contributions, a different crediting method, a different index or underlying account, accruing more interest than as depicted, or changing the loan terms with a lender, I hereby hold harmless Lionsmark Capital, DaVinci Financial & Insurance Associates, and Darren Sugiyama as an individual (hereinafter referred to as the "Released Parties") from any and all claims, causes of action, damages, demands, liens, rights, controversies, losses, costs and expenses (including without limitation attorneys' fees and costs) or charges of whatever nature. I also, on behalf of my agents, attorneys, executors, administrators, legal representative, successors, heirs, next of kin, assigns, and the like, agree to never institute any action or any suit at law or in equity against the Released Parties, or institute or prosecute, or in any way aid in the institution or prosecution of any claim arising from any unfavorable outcomes that may result from

any changes made to the policy design or the third party loan design as illustrated in this document. I also hold harmless the Released Parties for negative outcomes that may come from poor market performance; policy changes instituted by insurance carriers; any future financial hardships incurred by either my business, myself as an individual person or my estate; or any other unforeseen factors that my contribute to an outcome less desirable that what is depicted in this document.

Acknowledgement Of Suitability

I attest that the Released Parties have not attempted to influence my decision regarding the size of this policy, the death benefit amount, nor the decision to finance premiums versus paying premiums out-of-pocket. I also attest that the overall program depicted in this document, including but not limited to the death benefit amount, the annual program contribution amounts (the premium paid out-of-pocket requirements and/or the interest paid out-of-pocket), the risk of any future borrowing rate increases at the end of each loan term, the risk of interest accrual (should I elect to accrue any interest), the type of life insurance product and its chassis design, the way in which the policy's crediting and charges methods are designed, the third party lender loan terms which I have read in the term sheet and the entire loan document provided to me by the third party lender, and any other assumptions made in this document were designed based on my own requests, my own sound mind and judgement, as well as any outside counsel I may have received from my attorney, CPA, and/or trusted advisors, and not by the Released Parties. Lionsmark Capital, DaVinci Financial & Insurance Associates, and Darren T. Sugiyama as an individual, have merely designed and modeled this program based on my own personal requests and I am purchasing this life insurance policy using the knowledge I have personally procured through my own independent research and due diligence. I attest that have been given ample time to consult my attorney, CPA and/or my trusted advisors that manage and/or advise me on my estate and financial matters prior to making any decision to purchase this life insurance policy.

HYPOTHETICAL SYNTHETIC ASSETS

A COMPARISON OF LEVERAGED vs. NON-LEVERAGED HYPOTHETICAL ASSETS

BACKTESTING MODELS FOR:
PARTIAL-EQUITY INTEREST ACCRUAL

SYNTHETICALLY MODELED FOR: Male A55 - Retirement Incc
ADVISOR: Darren Sugiyama
DATE CREATED: 4/6/2022

PURPOSE OF THIS DOCUMENT

The purpose of this document is to illustrate a Synthetic Hypothetical Index Account modeling different portfolio features. All contents and outcomes modeled in this document are purely hypothetical and do not represent any particular investment, index, life insurance policy, annuity, or any other or financial instrument or product whatsoever.

PARTIAL-EQUITY INTEREST ACCRUAL

The *Leveraged Hypothetical Index Account* utilizes third-party lender capital. In some cases, 100% of the infused capital will be funded by the lender, and in some cases, the account will be funded by some lender capital and some client capital. In some cases the client will pay the lender the interest due each year, and in other cases, the interest due may be accrued. This report is one of several platform designs that could be modeled in theory. This hypothetical account's returns are correlated with the S&P 500 and models actual historical returns of the S&P 500 (not including dividends) using these parameters:

- 0.00% Protective Floor
- 8.50% Cap

The *Protective Floor* is the minimum gross return in a given year, excluding any additional bonuses that may exist. The *cap* is the maximum return allowable in a given year, excluding any additional bonuses that may exist.

In some cases, there may be a multiplier bonus factor applied to the after-floor/cap return explained above, depending on the hypothetical charges and crediting design of this fictitious account. For example, if the multiplier bonus factor was 2.00x and the S&P 500 produced a 5.00% return in a given year, the after-floor/cap/multiplier index credit would be 10.00% (5.00% multiplied by 2.00x equals 10.00%).

There are also account charges applied to this hypothetical model as well. Some charges are applied in full at BOY, and some charges are applied monthly. Some charges are static charges, while others may be asset-based charges (a percentage charged to the monthly value of the account). Not all models will include asset-based charges and not all models will include a multiplier bonus credit either. For more information about these variables, go to the Account Charges+Credits+Bonuses section of this document.

The *Partially-Leveraged Hypothetical Synthetic Account* also allows the client to take loans from the institution holding the account. This borrowed amount is moved into a separate index account and earns a return that is also correlated with the S&P 500, using the same floor/cap/multiplier crediting method used in the primary index account. The borrowed amount is charged an interest rate (referred to as the Participating Loan Rate) and is explained in the Account Loans section of this document.

INTEREST ACCRUAL

Interest accrual is the act of not paying the interest due and capitalizing (rolling) such amount into the cumulative loan balance. Should the client exercise any sort of interest accrual in a real world situation, they should be aware that the element of compound debt - as a result of accruing any interest due - introduces an additional variable of risk that should be considered relative to their net worth, liquidity, and risk tolerance. It is recommended that all clients should consult their financial professional(s) on such risk factor to determine whether or not interest accrual is appropriate and suitable for their unique situation. Lionsmark Capital may model the concept and hypothetical outcomes of doing so upon the client's request, however should the client decide to accrue interest in their own financial strategy, they do so on their own volition at their own risk and hold harmless Lionsmark Capital and all of its principals from any unfavorable outcomes that may come.

WHAT THIS DOCUMENT IS NOT

This document is not intended to model any specific investment fund, index fund, life insurance policy, annuity policy, or financial instrument/product. This is merely a tool to teach users how different account constructions work and allows the user to change the variables and features in regards to crediting methods, account charges, and taxable applications for the purposes of better understanding how these features may affect future financial outcomes. This is not a projection tool for any specific product. This is not intended to be a "sales tool" to

BACKTESTING

In many hypothetical projections of accumulation/investment/retirement accounts, an average rate of return is assumed and applied to every year. This assumption of a static (and perpetually positive) annual return is not realistic, for volatility is everpresent in most index accounts. Historically speaking, any index, bond fund, and virtually any other type of underlying investment/index/bond portfolio will experience volatility and negative return years. Our proprietary software models such volatility throughout several different 40-year periods of historical market performance.

In order to illustrate outcomes that may exist in these different market scenarios, we have analyzed 121 different 40-year scenarios using historical returns of a particular index. Such backtested models in the following pages are hypothetical index accounts with various charges and crediting methods that may be similar to some indexed universal life insurance products, but these projections are meant to be used as a proxy and do not represent any specific product from any specific carrier. In addition, these models do not represent any real or actual investment products/funds whatsoever. These models are merely constructed to analyze the general concept of how volatility may positively or negatively affect accumulation values over time using hypothetical crediting methods and account charges in these hypothetically constructed accounts.

We have backtested 121 different 40-year historical periods in various annual point-to-point segments using different monthly starting and ending points.

The Compounded Annual Growth Rates (CAGR) has been calculated during each of these 121 different 40-year periods analyzed. This report highlights two of these 40-year periods: The 40-year period with the best CAGR, and the 40-year period with the worst CAGR.

1 BEST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 2/1/1978)

Out of every 121 different 40-year period of S&P 500 performance we analyzed, this 40-year period had the best compounded annual growth rate.

9.02% Compounded Annual Growth Rate (CAGR) of the raw S&P 500 during this 40-year annual point-to-point period

2 WORST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 10/1/1971)

Out of every 121 different 40-year period of S&P 500 performance we analyzed, this 40-year period had the worst compounded annual growth rate.

6.30% Compounded Annual Growth Rate (CAGR) of the raw S&P 500 during this 40-year annual point-to-point period

It is important to note that the "Worst 40" only depicts the 40-year period with the worst CAGR of the 121 periods analyzed. It is possible that future 40-year periods could in fact produce an even worse outcome than this period analyzed, and that this period analyzed is not the "absolute worse case scenario that could ever happen. It is only the "worst" 40-year period analyzed in this particular report.

It is also possible that future 40-year periods could in fact produce an even better outcome than the "Best 40-Year Period" analyzed, in which case an even better outcome could be feasible.

Neither the "Best 40" nor the "Worst 40" are meant to be benchmarks, expectations, or guarantees of future outcomes, rather they are meant to demonstrate a range of hypothetical outcomes for the purposes of educating interested parties.

In both 40-year scenarios modeled, all interested parties should be aware that in any hypothetical year wherein the EOY INDEX VALUE NET OF INT & EXT LOANS displays a negative balance, in a real world scenario, the client may be required to post additional collateral or pay down certain loan balances to cover the shortfall between the EOY GROSS INDEX ACCUMULATED VALUE minus any early termination fees or charges.

BEST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 2/1/1978)

RETIREMENT INCOME DRAWDOWN ASSUMPTIONS	
Drawdown Type:	PARTICIPATING
PLR:	5.00%
% of Previous Year's EOY Value Drawdown:	8.00%
THIRD PARTY LENDER PAYOFF ASSUMPTIONS	
Payoff Loan In Full In Year:	14
Payoff Amount:	\$13,930,159
Third Party Loan Paid Off With:	PAR LOAN

GAP COLLATERAL REQUIREMENTS	
Type Of Gap Collateral:	Securities
Collateral Valued At:	65.00%
The Gap Collateral amount is only an estimation and is calculated by the cumulative loan balance in a given year, minus 95% of (the EOY value in the previous year after charges and before such previous year's EOY index credit, plus the new Total Index Contribution in the current year, minus all charges and early termination fees associated with current year's Total Index Contribution). This calculation is the equivalent of assuming a 0% index credit in the previous year (since the EOY index credit in the previous year would not have credited at the time of the current year's loan anniversary. The current year's EOY index credit would obviously not have credited yet either. This value is then multiplied by the % of "Collateral Valued At" above, estimating the gap collateral required based on the "Type Of Gap Collateral" assumed. This is just a hypothetical calculation. Each lender has different collateral requirements and terms.

Payoff Amount:	\$13,930,159
Third Party Loan Paid Off With:	PAR LOAN

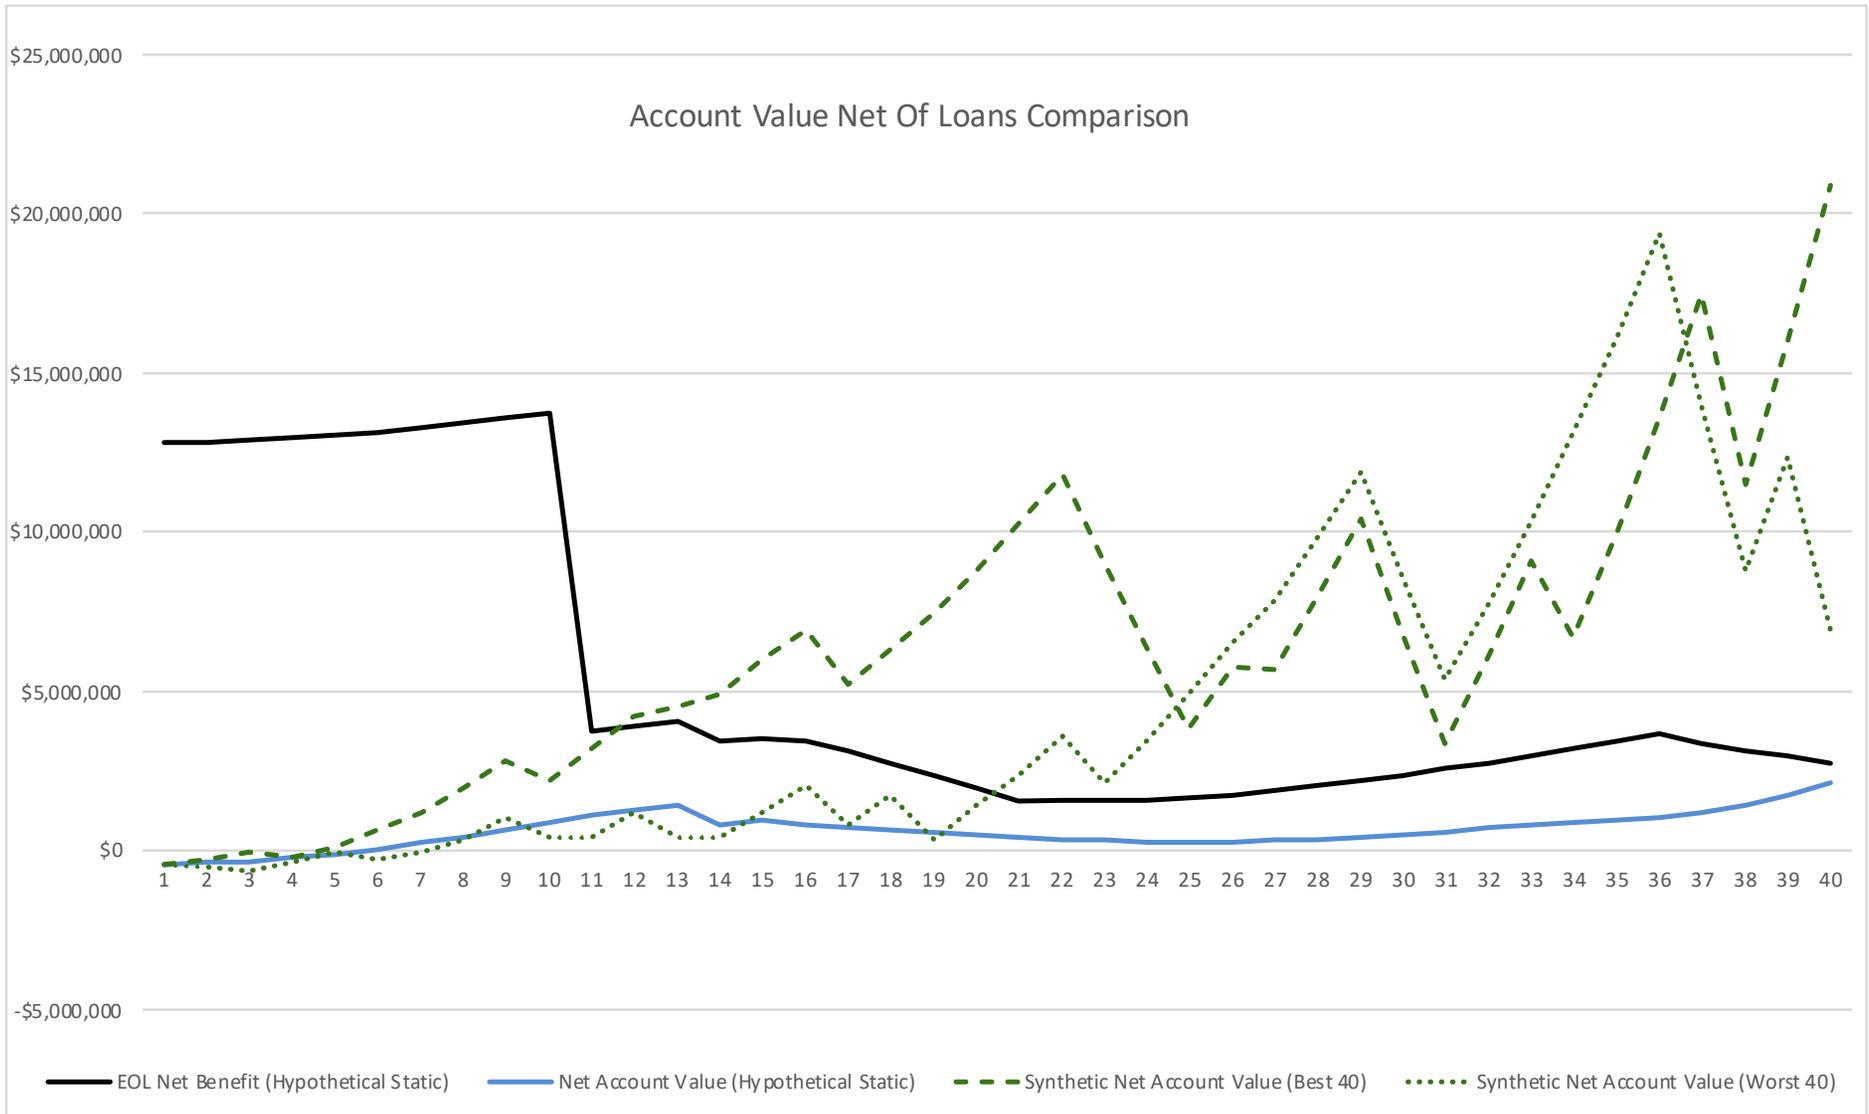

GAP COLLATERAL REQUIREMENTS	
Type Of Gap Collateral:	Securities
Collateral Valued At:	65.00%
The Gap Collateral amount is only an estimation and is calculated by the cumulative loan balance in a given year, minus 95% of (the EOY value in the previous year after charges and before such previous year's EOY index credit, plus the new Total Index Contribution in the current year, minus all charges and early termination fees associated with current year's Total Index Contribution). This calculation is the equivalent of assuming a 0% index credit in the previous year (since the EOY index credit in the previous year would not have credited at the time of the current year's loan anniversary. The current year's EOY index credit would obviously not have credited yet either. This value is then multiplied by the % of Collateral Valued At above, estimating the gap collateral required based on the "Type Of Gap Collateral" assumed. This is just a hypothetical calculation. Each lender has different collateral requirements and terms.	

1ST YEAR COLLATERAL REQUIREMENT:	\$810,999
TOTAL CLIENT OUTLAY:	-\$1,000,000

WORST 40-YEAR S&P CAGR PERIOD (OF 121 PERIODS ANALYZED)

The hypothetical model in this document assume certain crediting methods and index account charges that are purely hypothetical and do not represent any particular investment, life insurance policy or index fund. Hypothetical crediting methods, charges, values and returns are not guaranteed. Hypothetical returns used in this document are based on historical index returns that do not include dividends and are purely modeled as a hypothetical example of index volatility over a period of time for educational purposes and are not intended to convince someone to purchase any particular product.

SCENARIO MODELED	PAYOFF YEAR	TOTAL OUTLAY	TOTAL INCOME DRAWDOWN	NET ACCOUNT VALUE IN YEAR 40	RETURNS DEPICTED	VOLATILITY MODELED	CAGR	PAR LOAN RATE
— Hypothetical Static:	14	-\$1,000,000	\$5,160,613	\$2,128,466	hypothetical static	no	5.50%	5.00%
- - - Synthetic Best 40*:	14	-\$1,000,000	\$16,970,415	\$20,891,930	actual historical*	yes	9.02%	5.00%
..... Synthetic Worst 40*:	14	-\$1,000,000	\$14,067,230	\$6,936,965	actual historical*	yes	6.30%	5.00%

*In modeling every 40-year annual point-to-point period between 1/1/1970 and 12/31/2019, there were 121 different 40-year periods. Each of these 121 different 40-year periods have been analyzed and ranked based on their Compounded Annual Growth Rate (CAGR). This report highlights the Best and Worst 40-year periods limited to this sampling of 121 different 40-year periods. In real-world scenarios, it is possible for a 40-year period to produce a worse CAGR than the Worst 40 in this report. In such case, outcomes could be significantly worse than as depicted in this hypothetical report.

BEST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 2/1/1978)

ASSET-BASED CHARGES (%) Account charges as a percentage of gross account value, after new TOTAL INDEX CONTRIBUTION and 100% BOY charges and 50% of remaining FIXED CHARGES (\$) are deducted.

ASSET-BASED CHARGES (\$) The previous year's EOY GROSS INDEX ACCUMULATED VALUE minus 100% BOY charges, minus 50% of remaining FIXED CHARGES (\$) multiplied by the ASSET-BASED CHARGES (%).

FIXED CHARGES (\$) Amounts taken from a real life product. These charges in a real life product would most likely not be fixed, as there would be some variable charges. This is merely a proxy for this category of charges.

INDEX CREDIT The after-floor after-cap index return, before any bonuses or participation rates are applied or credited.

MULTIPLIER BONUS (x) A numerical number determined by a particular bonus schedule, multiplied by the basic after-floor, after-cap, INDEX CREDIT.

INDEX CREDIT w/ MULTIPLIER The INDEX CREDIT multiplied by the MULTIPLIER BONUS (x). (e.g. If the MULTIPLIER BONUS (x) was 2.00, and the INDEX CREDIT was 10.00%, the INDEX CREDIT w/ MULTIPLIER would be 20.00%)

PERSISTENCY BONUS (+) A bonus credit added to the INDEX CREDIT. (e.g. If the INDEX CREDIT was 10.00% and the PERSISTENCY BONUS (+) was 0.50%, the TOTAL INDEX CREDIT (%) would be 10.50%)

TOTAL INDEX CREDIT (%) The INDEX CREDIT multiplied by the MULTIPLIER BONUS (x) plus the PERSISTENCY BONUS (+).

TOTAL INDEX CREDITS (\$) The TOTAL INDEX CREDIT (%) multiplied by the EOY VALUE AFTER CHARGES B4 CREDIT.

TOTAL CHARGES (\$) The sum of the ASSET-BASED CHARGES (\$) and the FIXED CHARGES (\$).

YEAR-END GAIN/LOSS (\$) The EOY GROSS INDEX ACCUMULATED VALUE net gain or loss in each year based on the TOTAL INDEX CREDITS (\$) minus the TOTAL CHARGES (\$) in a given year.

EOY VALUE AFTER CHARGES B4 CREDIT The EOY account value after any new contributions in such year and after all charges have been subtracted from this cumulative value, before any index credits have been applied.

EOY GROSS INDEX ACCUMULATED VALUE The EOY account value after any new contributions, after any "Total Index Credits (\$)" have been added, and after the "Total Charges (\$)" have been subtracted.

EOY INDEX VALUE NET OF INT & EXT. LOANS The EOY GROSS INDEX ACCUMULATED VALUE minus the third party Cumulative Loan Balance (if any), minus any internal cumulative loan balances as a result of Participating Loan

HYPOTHETICAL SYNTHETIC ASSET

WORST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 10/1/1971)

WORST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 10/1/1971)

ASSET-BASED CHARGES (%) Account charges as a percentage of gross account value, after new TOTAL INDEX CONTRIBUTION and 100% BOY charges and 50% of remaining FIXED CHARGES (\$) are deducted.

ASSET-BASED CHARGES (\$) The previous year's EOY GROSS INDEX ACCUMULATED VALUE minus 100% BOY charges, minus 50% of remaining FIXED CHARGES (\$) multiplied by the ASSET-BASED CHARGES (%).

FIXED CHARGES (\$) Amounts taken from a real life product. These charges in a real life product would most likely not be fixed, as there would be some variable charges. This is merely a proxy for this category of charges.

INDEX CREDIT The after-floor after-cap index return, before any bonuses or participation rates are applied or credited.

MULTIPLIER BONUS (x) A numerical number determined by a particular bonus schedule, multiplied by the basic after-floor, after-cap, INDEX CREDIT.

INDEX CREDIT w/ MULTIPLIER The INDEX CREDIT multiplied by the MULTIPLIER BONUS (x). (e.g. If the MULTIPLIER BONUS (x) was 2.00, and the INDEX CREDIT was 10.00%, the INDEX CREDIT w/ MULTIPLIER would be 20.00%)

PERSISTENCY BONUS (+) A bonus credit added to the INDEX CREDIT. (e.g. If the INDEX CREDIT was 10.00% and the PERSISTENCY BONUS (+) was 0.50%, the TOTAL INDEX CREDIT (%) would be 10.50%)

TOTAL INDEX CREDIT (%) The INDEX CREDIT multiplied by the MULTIPLIER BONUS (x) plus the PERSISTENCY BONUS (+).

TOTAL INDEX CREDITS (\$) The TOTAL INDEX CREDIT (%) multiplied by the EOY VALUE AFTER CHARGES B4 CREDIT.

TOTAL CHARGES (\$) The sum of the ASSET-BASED CHARGES (\$) and the FIXED CHARGES (\$).

YEAR-END GAIN/LOSS (\$) The EOY GROSS INDEX ACCUMULATED VALUE net gain or loss in each year based on the TOTAL INDEX CREDITS (\$) minus the TOTAL CHARGES (\$) in a given year.

EOY VALUE AFTER CHARGES B4 CREDIT The EOY account value after any new contributions in such year and after all charges have been subtracted from this cumulative value, before any index credits have been applied.

EOY GROSS INDEX ACCUMULATED VALUE The EOY account value after any new contributions, after any "Total Index Credits (\$)" have been added, and after the "Total Charges (\$)" have been subtracted.

EOY INDEX VALUE NET OF INT & EXT LOANS The EOY GROSS INDEX ACCUMULATED VALUE minus the third party Cumulative Loan Balance (if any), minus any internal cumulative loan balances as a result of Participating Loans

BEST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 2/1/1978)

INTERNAL ACCOUNT LOANS: PARTICIPATING PLR: 5.00%

- 3RD PARTY PAYOFF USING PARTICIPATING LOAN** The index value used to payoff the 3rd party premium financing loan. This can be done with either a withdrawal or a participating loan.
- INCOME DRAWDOWNS PARTICIPATING LOANS** These are drawdown modeling requests made by the client for supplemental retirement income. These can be done with either fixed loans or participating loans.
- CUMULATIVE ACCRUED INTERNAL LOAN PRINCIPAL** The running YTD total internal loan, including all drawdowns, plus the accrued interest on the drawdowns.
- ACRUED INTERNAL LOAN INTEREST** The interest due each year on the internal loans, including the drawdown principal AND the accrued/comounded interest from previous years.
- INDEX CREDIT AFTER CHARGES** The net dollar interest gained each year on the funds moved to the INDEX LOAN ACCOUNT (after charges) assuming participating loans are credited based on the INDEX CREDIT with no bonuses.
- CUMULATIVE INTERNAL DEBT BALANCE** The running YTD total of accrued internal debt from internal loans, including the accrued interest.
- CUMULATIVE INDEXED LOAN ACCOUNT VALUE** The running YTD total of accumulated funds in the INDEX LOAN ACCOUNT as a result of the participating loans leaving the primary index account, including index credit gains, minus charges on these particular funds.
- CUMULATIVE PAR LOAN GAIN/LOSS** The running YTD cumulative net gain or loss as a result of Participating Loans (the CUMULATIVE INTERNAL DEBT BALANCE plus the CUMULATIVE INDEXED LOAN ACCOUNT VALUE).
- EOY GROSS INDEX ACCUMULATED VALUE** The indexed accumulated value, not including any surrender charges, internal loans, or 3rd party lender debt.
- EOY INDEX VALUE NET OF INT & EXT LOANS** The indexed accumulated value, minus any surrender charges, internal loans, and 3rd party lender debt.

WORST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 10/1/1971)

INTERNAL ACCOUNT LOANS: PARTICIPATING PLR: 5.00%

3RD PARTY PAYOFF USING PARTICIPATING LOAN The index value used to payoff the 3rd party premium financing loan. This can be done with either a withdrawal or a participating loan.

INCOME DRAWDOWNS PARTICIPATING LOANS These are drawdown modeling requests made by the client for supplemental retirement income. These can be done with either fixed loans or participating loans.

CUMULATIVE ACCRUED INTERNAL LOAN PRINCIPAL The running YTD total internal loan, including all drawdowns, plus the accrued interest on the drawdowns.

ACRUED INTERNAL LOAN INTEREST The interest due each year on the internal loans, including the drawdown principal AND the accrued/compounded interest from previous years.

INDEX CREDIT AFTER CHARGES The net dollar interest gained each year on the funds moved to the INDEX LOAN ACCOUNT (after charges) assuming participating loans are credited based on the INDEX CREDIT with no bonuses.

CUMULATIVE INTERNAL DEBT BALANCE The running YTD total of accrued internal debt from internal loans, including the accrued interest.

CUMULATIVE INDEXED LOAN ACCOUNT VALUE The running YTD total of accumulated funds in the INDEX LOAN ACCOUNT as a result of the participating loans leaving the primary index account, including index credit gains, minus charges on these particular funds.

CUMULATIVE PAR LOAN GAIN/LOSS The running YTD cumulative net gain or loss as a result of Participating Loans (the CUMULATIVE INTERNAL DEBT BALANCE plus the CUMULATIVE INDEXED LOAN ACCOUNT VALUE).

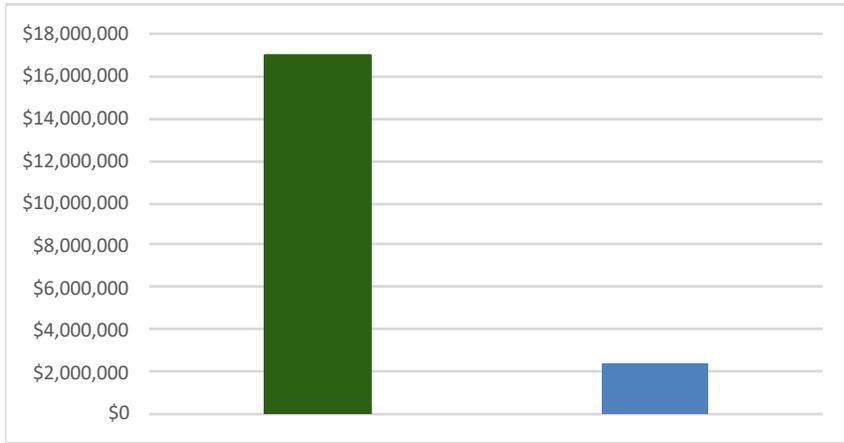

EOY GROSS INDEX ACCUMULATED VALUE The indexed accumulated value, not including any surrender charges, internal loans, or 3rd party lender debt.

EOY INDEX VALUE NET OF INT & EXT LOANS The indexed accumulated value, minus any surrender charges, internal loans, and 3rd party lender debt.

DISCLAIMER: The "Gross Equities Return" is a hypothetical return based on historical annual point-to-point S&P 500 performance (starting on the first day of a particular month) not including dividends, plus a 2.00% bonus added. The "Gross Bond Return" is a hypothetical return based on historical 10-Year T-Bond Returns during the January 1st to December 31st period. The taxation and investment fees are merely hypothetical based on certain assumptions, and would vary from client situation to client situation based on a number of factors and variables. Such variables may be changed and modeled per the client or advisor's request. The assumptions made in this document are purely hypothetical and do not represent any specific investment, fund or asset in particular. The purpose of this document is for educational purposes only.

AVERAGE ANNUAL INCOME DRAWN DOWN: \$482,525

DISCLAIMER: The "Gross Equities Return" is a hypothetical return based on historical annual point-to-point S&P 500 performance (starting on the first day of a particular month) not including dividends, plus a 2.00% bonus added. The "Gross Bond Return" is a hypothetical return based on historical 10-Year T-Bond Returns during the January 1st to December 31st period. The taxation and investment fees are merely hypothetical based on certain assumptions, and would vary from client situation to client situation based on a number of factors and variables. Such variables may be changed and modeled per the client or advisor's request. The assumptions made in this document are purely hypothetical and do not represent any specific investment, fund or asset in particular. The purpose of this document is for educational purposes only.

HYPOTHETICAL EQUITIES & BONDS ACCOUNT vs. PARTIAL-EQUITY INTEREST ACCRUAL

WORST CAGR 40-YEAR PERIOD OUT OF 121 DIFFERENT INDEX PERIODS ANALYZED (STARTING 10/1/1971)

Average Equities Return: 10.02%

Average T-Bond Return: 3.46%

Average Net Portfolio Return: 4.18%

WORST 40

AVERAGE ANNUAL INCOME DRAWN DOWN: \$203,503

DISCLAIMER: The "GrossEquitiesReturn" is a hypothetical return based on historical annual point-to-point S&P 500 performance (starting on the first day of a particular month) not including dividends, plus a 2.00% bonus added. The "GrossBond Return" is a hypothetical return based on historical 10-Year T-Bond Returns during the January 1st to December 31st period. The taxation and investment fees are merely hypothetical based on certain assumptions, and would vary from client situation to client situation based on a number of factors and variables. Such variables may be changed and modeled per the client or advisor's request. The assumptions made in this document are purely hypothetical and do not represent any specific investment, fund or asset in particular. The purpose of this document is for educational purposes only.

CLIENT CONFIRMATION OF UNDERSTANDING THIS DOCUMENT

I understand that this document models hypothetical synthetic asset(s) that represent proxies for some real world products, and are not depictions of the actual real world products whatsoever. I understand that the various elements and assumptions made in this document including but not limited to the hypothetical contributions, hypothetical performance, hypothetical index returns, hypothetical crediting methods, hypothetical static charges, hypothetical asset-based charges, hypothetical asset values, hypothetical lender borrowing rates, hypothetical borrowing rate components, hypothetical borrowing rate increases, and hypothetical loan fees are merely fictitious and modeled for the purpose of deepening my understanding of how such elements may hypothetically affect outcomes over time.

I understand that this document and the data depicted within should not be used to determine my decision to invest in any investment fund or purchase and sort of insurance-related product, and that I should refer to the compliance-approved prospectus or insurance carrier illustration. I understand that I should consult my trusted advisors, including but not limited to my financial advisor, insurance agent, CPA, estate planning attorney, to seek advice on investing in any sort of investment or purchasing any sort of insurance product.

I understand that Lionsmark Capital is a data analytics company that merely models a range of outcomes based on hypothetical data inputted into its system, that this document reflects such hypothetical outcomes, and agree that I shall hold harmless Lionsmark Capital, DaVinci Financial & Insurance Associates, and Darren T. Sugiyama as an individual, for any outcomes that may result from my own decision to invest in specific investments or purchase specific insurance products.

I understand that Lionsmark Capital has used this hypothetical modeling document for the purposes of educating me and my advisors on how certain charges, crediting methods, and utilization of a third party lender's capital may affect outcomes over time. I attest that I have been shown less than desirable sequences of returns from historical 40-year periods, and that I was specifically shown the 40-year period that produced the worst compounded annual growth rate out of the 121 different 40-year periods analyzed. I also understand that this "Worst 40" is not the "worst possible case scenario," and that it is in fact possible that any future 40-year periods could produce an even worse outcome than the "Worst 40" version depicted in this document. I also understand that the "Best 40" period produced the best compounded annual growth rate out of the 121 different 40-year periods analyzed, and that this "Best 40" is not the "best possible case scenario," and that it is possible that any future 40-year periods could in fact produce an even better outcome than the "Best 40" version depicted in this document.
